partial source
coverage

formalized source note
(not a caveat)

Status: partially formalized because of three coverage boundaries;
Theorem 1 is checked and no central-result caveat is claimed

Three source clarifications — not caveats and not partial-status drivers

Note 1: loss/accuracy label. $E|\hat{Y} - Y|$ is
loss; Lean proves expected correctness is its
complement.

Note 2: half-tie strictness. The strict-gap
form is used for $\eta \neq 1/2$; the $\eta = 1/2$
boundary is treated as a tie.

Note 3: Definition 4 boundary. Defini-
tion 4 exempts boundary profiles; the dis-
played Theorem 1 forward implication is un-
changed.
