

Legend

Source inventory. The NBER Working Paper 11765 source-facing inventory is the first-price and GSP/VCG examples, Remarks 1–3, Definition 4, Lemmas 5–6, and Theorems 7–8. The compact review surface covers 24 source items through 25 statement rows plus one source-condition row for the strict ranked-value model used in the Theorem 8 source-event specialization.

Theorem 8 convention. The source theorem is ex post: after history and realized values are fixed, the payoff comparison does not depend on posterior beliefs. The Lean endpoint states the continuous dropout-price strategy, support uniqueness for payoff-PBE strategies on the nonnegative source support, and the induced finite source-event VCG outcome.
